# 1. Introduction

This document details the file structure for the reporting of CBA bank accounts in the electronic BTRS format (equivalent to a BAI3) for the BTRS Enriched report.

Although this specification has been designed to diligently respect the ANSI (American National Standard for Financial Services) BTRS standard, particular BTRS codes have been adapted to accommodate the Australian banking system.

This report will introduce the additional reconciliation information for NPP transactions found in the BTRS Report. Reconciliation information includes debtor BSB + Account as well as the debtor's name where the information is available. For outbound payments to a PayID the report will include the PayID Identifier paid as well as the linked PayID name.

The BTRS Enriched report extends the breadth of NPP transactions to provide a better customer experience than the standard BTRS report.

Should you have any questions about the contents of this document, please contact your Account Manager or Relationship Manager.

# 2. Important Information

The list of transaction codes provided in this document is complete at the time of publication, but as new services are provided by the bank, new transaction codes may be introduced.

There are fields within various record types and within certain transaction types that are currently not populated. We may choose to populate these fields in future, as more data becomes available.

# 3. Version Control

| Version | Date       | Changes                                        |
|---------|------------|------------------------------------------------|
| 1.0     | 20/11/2020 | Release of version 1.0                         |
| 1.1     | 2/12/2020  | Updated the sample and dates.                  |
| 2.0     | 08/06/2022 | Release of version 2.0 (PayTo related changes) |

## 4. File Structure

File Type: Variable Length Comma Delimited, UTF-8

The file consists of 7 record types. These are:

| Record Type | Description               | No. of Fields | Freq | Mandatory/ Optional | Comments                                                                             |
|-------------|---------------------------|---------------|------|---------------------|--------------------------------------------------------------------------------------|
| 01          | File Header Record        | 9             | 1    | Mandatory           | It must be the first record of the file. It features the file delivery date and time |
| 02          | Group Header Record       | 8             | Many | Mandatory           | It features the processing date                                                      |
| 03          | Account Header Record     | 31            | Many | Mandatory           | This record is intended to classify the transactional data by account.               |
| 16          | Transaction Detail Record | 7             | Many | Optional            | One record for each transaction item. Supports UTF-8 data                            |
| 49          | Account Trailer Record    | 3             | Many | Mandatory           | The Account Trailer record provides account level control totals.                    |
| 98          | Group Trailer Record      | 4             | Many | Mandatory           | The Group Trailer record provides group level control totals.                        |
| 99          | File Trailer Record       | 4             | 1    | Mandatory           | The File Trailer record provides file control totals.                                |

### 4.1 Field Notations

A number of notations are used in describing the field properties for each record type. They are tabulated as follows:

| Notation | Description                                                                                                                                        |
|----------|----------------------------------------------------------------------------------------------------------------------------------------------------|
| AN       | Denotes an alphanumeric data type under the Type column.                                                                                           |
| Date     | Denotes a date field under the Type column. The date is to be presented in CCYYMMDD format.                                                        |
| N        | Denotes a numeric field under the Type column.                                                                                                     |
| M        | A mandatory field is represented by a value of 'M' under the Man/Opt column.                                                                       |
| O        | An optional field is represented by a value of 'O' under the Man/Opt column.                                                                       |
| UTF-8    | UTF-8 is a variable-width character encoding used for electronic communication. Examples of UTF-8 encoded data is smiles ☺ , Latin characters etc. |

## 4.2 File Naming Convention

The default filename is:

BTRS-<Receiver ID>-<yyyy>><MM>><dd>><HH>><mm>><ss>><fff>>.

Receiver ID (see Record Type 01 Field #03 below)

Examples:

CommBiz Automated – BTRS-MAILBOX1-20161018054040073

CommBiz UI – BTRS-MAILBOX1-20161018054040073.txt

## 4.3 Supported Accounts

This file type provides balances and transactions for standard transaction accounts and business loans. Credit Cards and Home Loans are *not* supported. If you are unsure, please contact the bank.

## 4.4 A Note about Amount Fields

Fields that contain amounts are always represented as an integer in the smallest unit of the designated currency. For a currency that has 2 decimal places, the rightmost 2 digits will represent the 'cents'. For example, the amount 1234 could be understood as one thousand two hundred and thirty four Japanese Yen, or as Twelve dollars and thirty four cents, depending on the designated currency.

If a field is designated as being signed, then positive numbers will not have a sign, but negative numbers will have a minus sign ("-") immediately to the left of the digits in the number.

## 4.5 Record Type 01 File Header Record

| Field # | Field Description          | Field Details |      |                 | Comments/ Purposes                                                                                                                                          | Sample Data BTRS |
|---------|----------------------------|---------------|------|-----------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|
|         |                            | Man/ Opt      | Type | Min/ Max Length |                                                                                                                                                             |                  |
| 01      | Record Type                | M             | N    | 2/2             | Marks the beginning of the file. It has a constant value of 01.                                                                                             | 01               |
| 02      | Sender Identification      | M             | AN   | 3/3             | Identifies sender of the collection file. It has a constant value of CBA.                                                                                   | CBA              |
| 03      | Receiver Identification    | O             | AN   | 1/8             | An identifier for the receiver. It can be set to anything that the customer requires (up to 8 characters).                                                  | MAILBOX1         |
| 04      | File Creation Date         | M             | Date | 6/6             | Contains file creation date in YYMMDD format.                                                                                                               | 160126           |
| 05      | File Creation Time         | M             | N    | 4/4             | Contains file creation time stamp in HHMM format.<br>Right justified and zero filled.                                                                       | 0530             |
| 06      | File Identification Number | M             | N    | 1/3             | A sequence number commencing from 1, and to be incremented by 1.<br><br>Its purpose is to identify one or more collection files produced on a business day. | 1, 2... 999      |
| 07      | Physical Record Length     | O             | N    | 0               | Currently defined as NULL.                                                                                                                                  |                  |
| 08      | Physical Block Size        | O             | N    | 0               | Currently defined as NULL.                                                                                                                                  |                  |
| 09      | Version Number             | M             | N    | 1/1             | The version number is BAI version number 3.                                                                                                                 | 3                |

## 4.6 Record Type 02 Group Header Record

| Field # | Field Description                         | Field Details |      |                 | Comments/ Purposes                                                                                                                                         | Sample Data BTRS |
|---------|-------------------------------------------|---------------|------|-----------------|------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|
|         |                                           | Man/ Opt      | Type | Min/ Max Length |                                                                                                                                                            |                  |
| 01      | Record Type                               | M             | N    | 2/2             | Denotes a Group Header record. It has a constant value of 02.                                                                                              | 02               |
| 02      | Ultimate Receiver Identification          | O             | N    | 0/0             | Currently defined as NULL.                                                                                                                                 |                  |
| 03      | Originator                                | M             | AN   | 3/3             | Denotes the originator of transaction data. It has a constant value of CBA.                                                                                | CBA              |
| 04      | Group Status                              | M             | N    | 1/1             | Set group status value to 1.                                                                                                                               | 1                |
| 05      | As of Date (Settlement Date/ Cutoff Date) | M             | Date | 6/6             | Settlement date for BTRS data. Presented in YYMMDD format.                                                                                                 | 160125           |
| 06      | As at Time                                | O             | N    | 0/0             | Corresponds to the time stamp component, presented in HHMM format.<br>This field will be right justified and zero filled.<br>Currently defined as NULL.    |                  |
| 07      | Currency                                  | O             | N    | 3/3             | Currently set to AUD                                                                                                                                       | AUD              |
| 08      | As of Date Modifier                       | M             | N    | 1/1             | Contains a code to indicate the 'As of Date' modifier:<br>1 = interim/previous day<br>2 = final/previous day<br>3 = interim/same day<br>4 = final/same day | 2                |

## 4.7 Record Type 03 Account Header Record

### 4.8.1 Text field specification (Record Type 16, Field 7)

Text field is separated by '|' character with allocated positions to display enriched transaction information.

Information mentioned as optional will be present in the report if available. There are also placeholder positions defined to support any future additions to the information being presented.

The report specification will be amended to provide additional data when it becomes available in the placeholder fields.

## 5. Appendix 1: Common BTRS codes

Type codes within the BTRS standard are used to define the meaning of amounts within the 03 and 16 record types. Type codes can be grouped into 'ranges', with all type codes within a range having similar meanings. A list of these ranges and their meanings is given below.

| Type Codes | Description                                            |
|------------|--------------------------------------------------------|
| 001-099    | Account status type codes                              |
| 100        | Total credits summary type code                        |
| 101-399    | Credit summary and detail type codes                   |
| 400        | Total debits summary type codes                        |
| 401-699    | Debit summary and detail type codes                    |
| 700-799    | Loan summary and detail type codes                     |
| 900-919    | Custom account status type codes. Specific to CBA only |
| 920-959    | Custom credit summary and detail. Specific to CBA only |
| 960-999    | Custom debit summary and detail. Specific to CBA only  |

The following list of transaction codes is complete at the time of publication, but other codes may be introduced in future.

| BTRS Code | Description                                       | Dr/Cr | Customer Reference (Field 6) |
|-----------|---------------------------------------------------|-------|------------------------------|
| 115       | Lockbox Deposit                                   | CR    |                              |
| 165       | Direct Entry received                             | CR    |                              |
| 171       | Loan Deposit                                      | CR    |                              |
| 174       | Other Deposit                                     | CR    |                              |
| 175       | Cheque and Cash Deposit                           | CR    | Agent Number                 |
| 187       | Bank Cheque                                       | CR    |                              |
| 201       | Transfer - Automatic                              | CR    |                              |

## 6. Appendix 2: Changes from the CBA BAI2 File Spec

For customers who are transitioning from CBA's BAI2 reports, here is a summary of what has changed.

- File Header (01) Record
  - › The version number has incremented to 3
- Account Header (03) Record
  - › Removal of totals 902 and 903 – 8 fields in total removed from this record type
  - › Account number now includes the full 6 digit BSB. Previously the "06" was dropped off the front of the BSB.
- Transaction Detail (16) Record
  - › Field 2 now contains a true transaction type code, instead of a "miscellaneous credit" (399) or "miscellaneous debit" (699) code. See Appendix 1 for details of these codes and their meanings. These are much more fine grained than the codes that used to appear in field 5
  - › Field 5 used to contain either a numeric or alphanumeric code indicating a transaction type. This has been replaced with a unique transaction ID – this number can be quoted in any queries with the bank and will unambiguously identify the transaction in question.
  - › Field 6 contains a customer reference which will vary by transaction type. This field is now populated for a greater number of transactions than in the BAI2 format. – Appendix 1 includes the meaning of this field for each transaction type.

- › Field 7 contains a richer transaction description than was available in the BAI2 format. The description in BAI2 was limited to 34 characters in total. BTRS descriptions are fuller, and may contain multiple lines of description, delimited with a pipe character ("|")
- Account Trailer (98) Record
  - › The Number of accounts (field 3) has been added to this record type, bringing it into line with the international standard.

### 6.1.1. How to use sample data file

1. Open notepad
2. Copy the text mentioned sample data file section into the notepad.
3. Save the notepad file with .csv extension
4. Use the .csv file for verification in your application.
