Version Control

Version	Date	Changes
1.5	13/02/2018	Inclusion of version control Update to include NPP (New Payments Platform) information for BAI2 Bank Generated, BAI2 On-Demand & EDTS files Update to QIF formats Note: All readers must refer to v1.5 only; v1.4 is to be disregarded
1.6	13/01/2023	Update to include Scan Coin transaction description information for BAI2 report.

1.0 BAI2 File Format

This comma delimited format is used to download Cash Management account information from the Bank. The file format used for account information is called BAI2. This file format can be used to import account information into third party Accounting Software packages.

1.1 File Details

File Type: Variable Length Comma Delimited, ASCII text. The file consists of 7 record types. These are:

Type 01	File header record
Type 02	Group header record
Type 03	Account header record
Type 16	Transaction detail record
Type 49	Account trailer record
Type 98	Group trailer record
Type 99	File trailer record

1.2 File Header Record

Field name	Content	Comments
Record code	Numeric	Always "01"
Sender identification	Alpha	Always "CBA"
Receiver identification	Alphanumeric	Up to 8 characters
File creation date	Numeric	Format is yymmdd
File creation time	Numeric	Format is hhmm
File identification number	Numeric	Always "1"
Physical record length		Always null
Physical blocksize		Always null

Version number	Numeric	Always "2"
----------------	---------	------------

1.3 Group Header Record

Field name	Content	Comments
Record code	Numeric	Always "02"
Ultimate receiver		Always null
Originator	Alpha	Always "CBA"
Group status	Numeric	Always "1"
As of date	Numeric	Date for which the data is applicable Format is yymmdd
As of time		Always null
Currency code	Alpha	Always "AUD" for this record
As of date modifier	Numeric	Always "2"

1.4 Account Header Record

Field name	Content	Comments
Record code	Numeric	Always "03"
Customer account number	Alphanumeric	Branch and account number for DDA accounts or just account number for foreign currency and credit card accounts
Currency code	Alpha	Null for AUD accounts or the three character currency code for foreign currency accounts (e.g.

		USD for US dollar accounts)
Type code	Numeric	Type code from the type table below (refer #1)
Amount	Numeric	(Refer #2)
Items count	Numeric	Null except for type codes 100 and 400, set to number of CR and DR transactions respectively
Funds type		Always null

1.5 Type Code Table

015	Closing balance	900	Not applicable – set to 000
100	Total CR	901	Not applicable – set to 000
400	Total DR	902	Not applicable – set to 000
		903	Not applicable – set to 000
		904	Credit limit - only for credit card accounts
		905	Interest rate - only for credit card accounts

1.6 Transaction Detail Record

Field name	Content	Comments
Record code	Numeric	Always "16"
Type code	Numeric	"399" for credit transactions or "699" for debit transactions
Amount	Numeric	
Fund type		Always null
Bank reference number	Alpha or numeric	Three character transaction code. CommBiz exports using "Request Transaction History" only include numerics. The Bank-generated files are dictated by customer preference. Refer "Transaction Codes for BAI2". <i>NPP BAI2 Bank generated file Update:</i> <i>NPP transactions will be identified with the new 'NPP' code in alpha BAI2 files or with four new codes (948, 949, 988 & 989) in numeric BAI2 files. For further information, refer to "Tran Codes for Account Information"</i>
Customer reference number	Alphanumeric	Credit transactions will contain the Agent number for Agent book deposits, or the Agent/Terminal number for EFTPOS settlements. Debit transactions will contain the cheque number for cheque debits. <i>NPP BAI2 Bank generated file Update:</i> <i>An NPP end-to-end ID will be populated, up to 35 characters in length, if available</i>

		<i>NPP end-to-end ID is assigned by the sending bank and remains unchanged throughout the end-to-end chain.</i> <i>Some banks may assign the Direct Entry Lodgement Reference as the NPP end-to-end ID, for NPP payments processed to a BSB and account number</i>
Transaction reference field	Alphanumeric	Contains free form text description of the transaction. <i>NPP BAI2 Bank generated file Update:</i> <i>NPP transactions may contain narrative such as 'transfer to/from' depending on the sending bank, along with <alias name>, <PayID type> and any free text, truncated to 35 characters</i> <i>NPP BAI2 OnDemand Update:</i> <i>NPP transactions may contain narrative including</i> <i>'transfer to/from' (depending on sending bank),</i> <i><alias name>, <PayID type>, up to 280 character free text. Narratives will be separated by a pipe ie </i> <i>Scan Coin BAI2 Bank generated file Update:</i> <i>For coin machine deposits, full transaction description to be printed in this field.</i> <i>E.g. COIN MACHINE DEPOSIT \$5000.00" Branch 06 2000 Mary's Rent</i>

1.7 Account Trailer Record

Field name	Content	Comments
Record code	Numeric	Always "49"
Account control total	Numeric	Sum of all the amount fields in the preceding type 03, 16 and 88 records for this account (refer #2).
Number of records	Numeric	Total number of records for this account including the type 03, 16 and 88 records and this type 49 record.

1.8 Group Trailer Record

Field name	Content	Comments
Record code	Numeric	Always "98"
Control total	Numeric	Sum of the account control total fields in all the type 49 records for this group (refer #2).
Number of records	Numeric	Total number of records in this group including the type 02, 03 16 and 49 records and this 98 type record.

1.9 File Trailer Record

Field name	Content	Comments
Record code	Numeric	Always "99"
Control total	Numeric	Sum of the group control total fields in all type 98 records for this file (refer #2).
Number of groups	Numeric	Total number of groups in the file (will usually be one).
Number of records	Numeric	Total number of records in the file

Notes

#1	The TYPE CODE, AMOUNT, ITEMS COUNT and FUNDS TYPE fields are all repeated for each Type Code in the Type Code table.
#2	If the value of this amount field is negative then a negative sign is included at the beginning of the amount value.
#3	Record type 88 is a continuation record. It would be used if the data in a record type exceeded the physical record size or if it was desirable to divide the record. For example, splitting a text field. This record type is not currently used.

2. EDTS File Format

This fixed width format is used for exporting DDA statement and Foreign Exchange transactions data.

2.1 File details

File type	Fixed length ASCII text
Record length	60 bytes

The file consists of seven record types. These are:

Type 1	Client header record
Type 2	Account header record
Type 3	Account balance record
Type 4	Credit transaction record
Type 5	Debit transaction record
Type 6	Account trailer record
Type 8	Client trailer record

Note: Amount fields are right justified and zero filled

2.2 Client header record

Field name	Relative address	Length	Contents	Comments
Record type	1	1	Numeric	Always "1"
Filler	2	4	Numeric	Always "0000"
Filler	6	8	Numeric	Always "00000000"
Filler	14	43	Alpha	Always blanks
Client number	57	4	Numeric	

2.3 Account header record

Field name	Relative address	Length	Contents	Comments
Record type	1	1	Numeric	Always "2"
Branch number	2	4	Numeric	
Account number	6	8	Numeric	Right justified, blank filled
Export date	14	6	Numeric	Format is ddmmyy
Filler	20	37	Alpha	Always blanks
Client number	57	4	Numeric	

2.4 Account balance record

Field name	Relative address	Length	Contents	Comments
Record type	1	1	Numeric	Always "3"
Branch number	2	4	Numeric	
Account number	6	8	Numeric	Right justified, blank filled
Account balance	14	13	Numeric	Format is \$\$\$\$\$\$\$\$\$\$\$cc
Balance sign	27	1	Blank or (-)	Blank indicates a credit balance (-) indicates a debit balance
Filler (not in use)	28	11	Numeric	"00000000000"
Filler (not in use)	39	11	Numeric	"00000000000"
Filler	50	7	Blanks	Always blanks
Client number	57	4	Numeric	

2.5 Credit transaction record

Field name	Relative address	Length	Contents	Comments
Record type	1	1	Numeric	Always "4"

Branch number	2	4	Numeric	
Account number	6	8	Numeric	Right justified, blank filled
Transaction reference	14	8	Alpha/numeric Blanks	Agent number, depositing branch, POS terminal ID (right justified, blank filled) or blanks
Transaction type code	22	3	Alpha/numeric	<i>NPP Bank generated file Update:</i> <i>NPP transactions will be identified with the new 'NPP' code in alpha EDTS files or with two new credit codes (948, 949) in numeric EDTS files.</i> <i>For further information, refer to "Tran Codes for Account Information"</i>

Transaction amount	25	11	Numeric	Format is \$\$\$\$\$\$\$\$cc
Number of cheques	36	9	Numeric	Number of cheques in deposit (right justified, zero filled)
Lodgement reference	45	16	Alpha/numeric	Left justified and blank filled

2.6 Debit transaction record

Field name	Relative address	Length	Contents	Comments
Record type	1	1	Numeric	Always "5"
Branch number	2	4	Numeric	
Account number	6	8	Numeric	Right justified, blank filled
Transaction reference	14	8	Numeric	Initiating branch (right justified, blank filled)
Transaction type code	22	3	Alpha/numeric	<i>NPP Bank generated file Update:</i> <i>NPP transactions will be identified with the new 'NPP' code in alpha EDTS files or with two new debit codes (988, 989) in numeric EDTS files.</i> <i>For further information, refer to "Tran Codes for Account Information"</i>
Transaction amount	25	11	Numeric	Format is \$\$\$\$\$\$\$\$cc
Transaction number	36	9	Numeric	Cheque serial number or branch no (right justified, zero filled)

Lodgement reference	45	16	Alpha/numeric	Left justified, blank filled
---------------------	----	----	---------------	------------------------------

2.7 Account total record

Field name	Relative address	Length	Contents	Comments
Record type	1	1	Numeric	Always "6"
Branch number	2	4	Numeric	
Account number	6	8	Numeric	Right justified, blank filled
Total amount of credits	14	13	Numeric	Format is \$\$\$\$\$\$\$\$\$\$\$cc
Total amount of debits	27	13	Numeric	Format is \$\$\$\$\$\$\$\$\$\$\$cc
Total number of credits	40	5	Numeric	
Total number of debits	45	5	Numeric	
Filler	50	7	Blanks	Always blanks
Client number	57	4	Numeric	

2.8 Client trailer record

Field name	Relative address	Length	Contents	Comments
Record type	1	1	Numeric	Always "8"
Filler	2	12	Numeric	Always nines (999999999999)
Filler	14	43	Blanks	Always blanks
Client number	57	4	Numeric	

Note: More than one day of data can be downloaded at a time. In this situation, record types 1 through 8 may be repeated for each day's data in the data file.

3. QIF file format

The format is used by Quicken to import transaction history information. The file format consists of the following sections:

- Account header record
- Transaction records

Each item in the record is displayed on a separate line. Each record is separated by the '^' symbol.

3.1 Account header

The Account Header record is formatted as follows:

!Account

N[4 digit BSB]-[Account Number]

D[Account Name]

TBank

^

!Type:Bank

3.2 Transaction records

Each transaction record is formatted as follows:

D[Posted date of transaction in DD/MM/YYYY format]

T[Transaction amount. Include minus sign if amount is negative]

M[Transaction description]

L[This field will be left blank]

E[This field will be visible when the NPP Extended Transaction Description is requested]

4.0 QIF file format (Quicken AUS, 2004 and earlier)

The format is used by Quicken (AUS version, 2004 and earlier) to import transaction history information. The file format consists of the following sections:

- Account header record
- Transaction records

Each item in the record is displayed on a separate line. Each record is separated by the '^' symbol.

4.1 Account header

The Account Header record is formatted as follows: !Type:Bank

4.2 Transaction records

Each transaction record is formatted as follows:

D[Posted date of transaction in DD/MM/YY format]

T[Transaction amount. Include minus sign if amount is negative]

P[Transaction description]

E[This field will be visible when the NPP Extended Transaction Description is requested]
